Your Facilities Heat Wheels Can Be Wasting \$\$

Energy costs are rising and if your facilities heat wheels are not operating or are not operating up to design limits, thousands of dollars per year are being wasted. Older wheels such as Wing, Carnes, Senex, Berner and Cargocaire shed the desiccant that drives 75% of the energy recovery. They may look operational but they are not providing the energy recovery as designed.

If Your Heat Wheels Look Like These It's Time For Replacement

You can recover the cost of replacing your heat wheels in as little as 18 months in energy savings, plus you will see an improvement in the air quality and lower the stress on the other components in the HVAC system. The patented TR SERIES wheel system is designed specifically to replace existing energy recovery wheels and is a direct replacement for Berner, Cargocaire, Semco, Regenerative Heat Corp., Enreco, Governair, Flakt, Wing, Carnes, Heat Recovery Corp., Munters and others.

Contact Thermotech For Quotes and an Energy Savings Analysis

Just get us the model number of your heat wheel or the approximate diameter and we can have a quote back to you in 24 hours. If you provide us with operating data and cost of energy we can provide a energy savings analysis that will show you the savings. Contact Thermotech Now.
